- »» Q&A

Is DevOps Really Needed?

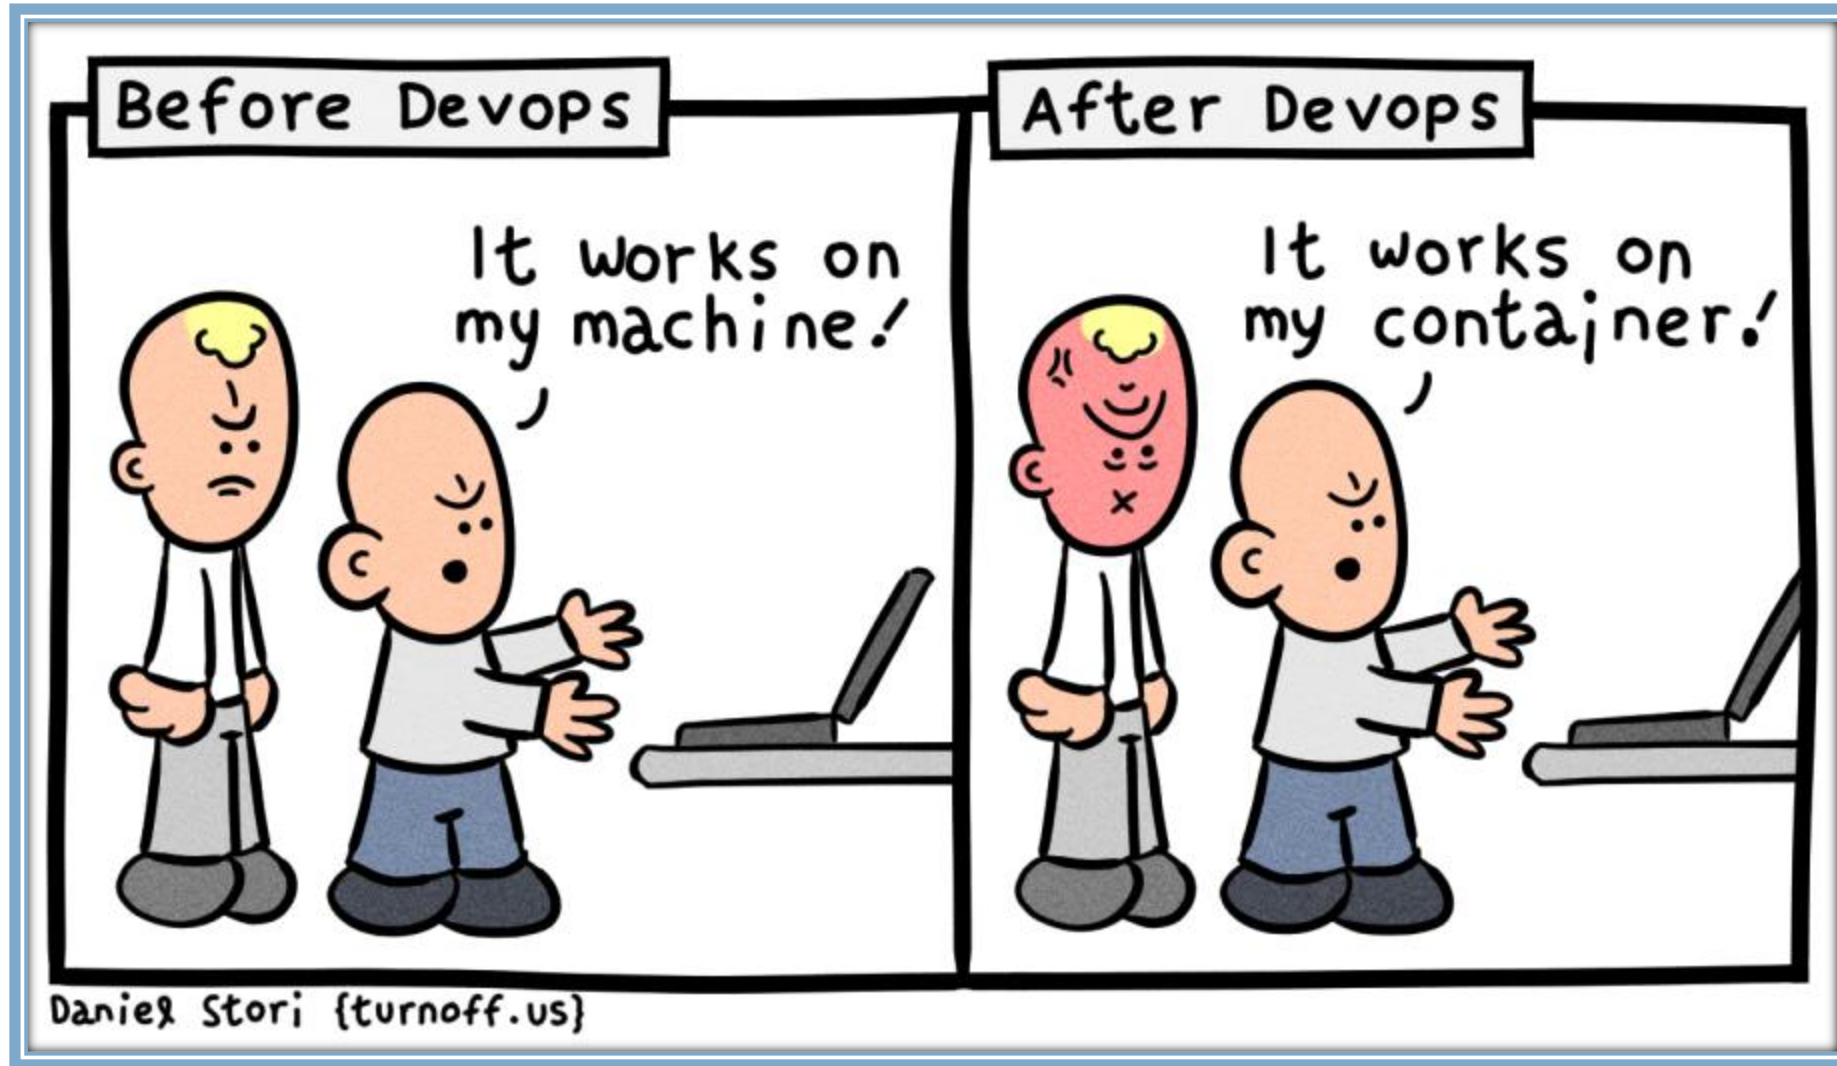

Adopting Agile Will Solve All the Problems

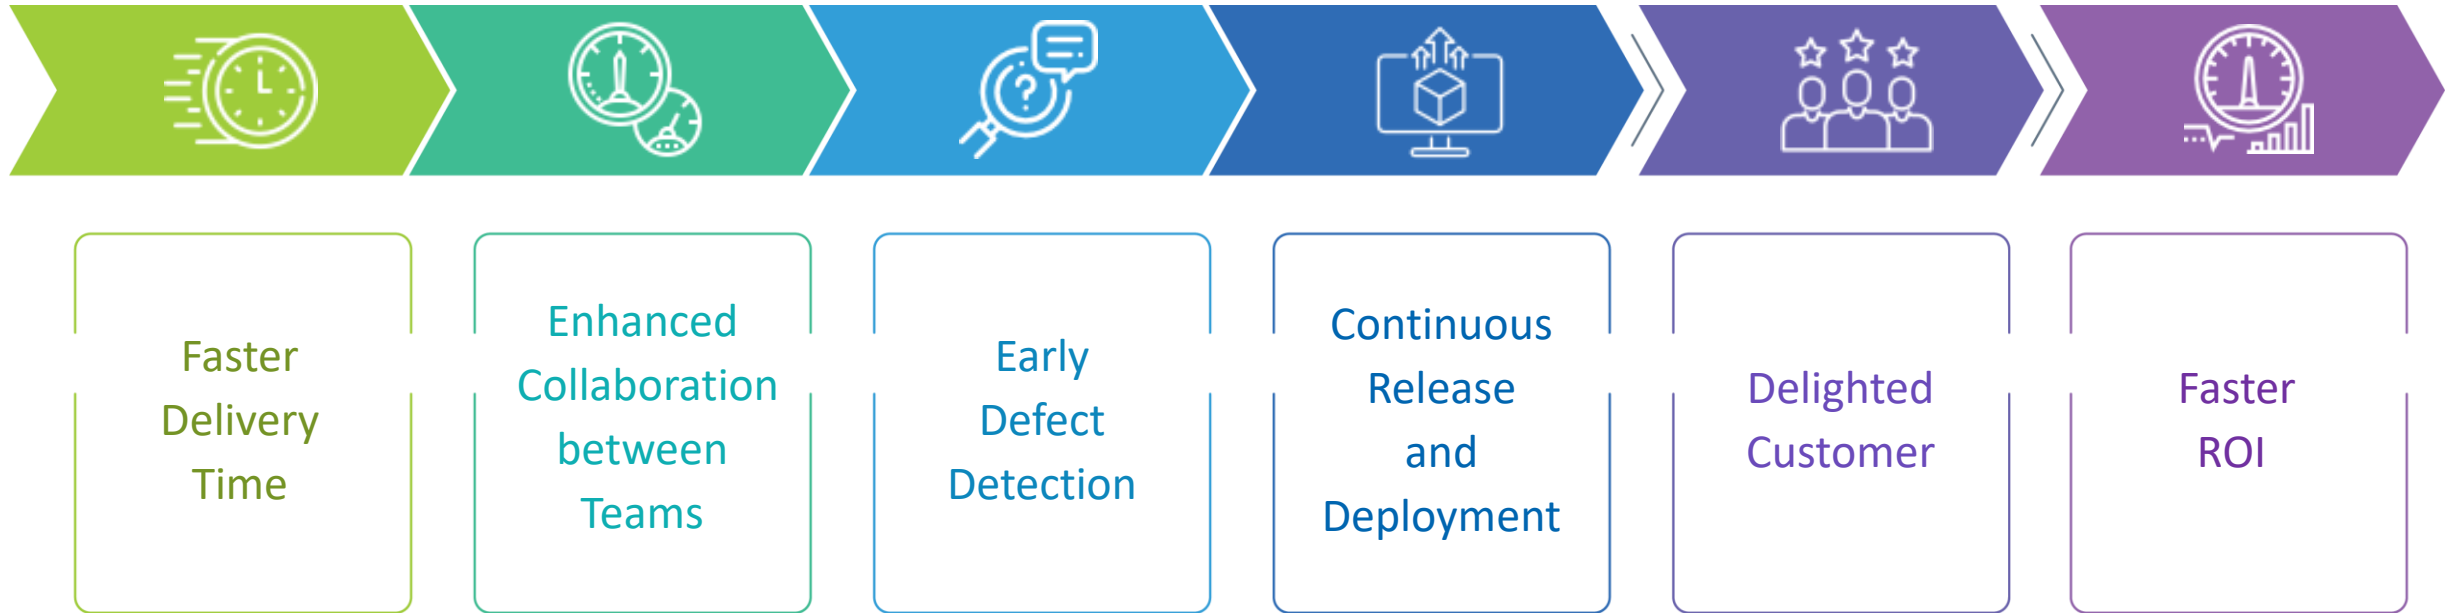

Or Will It?

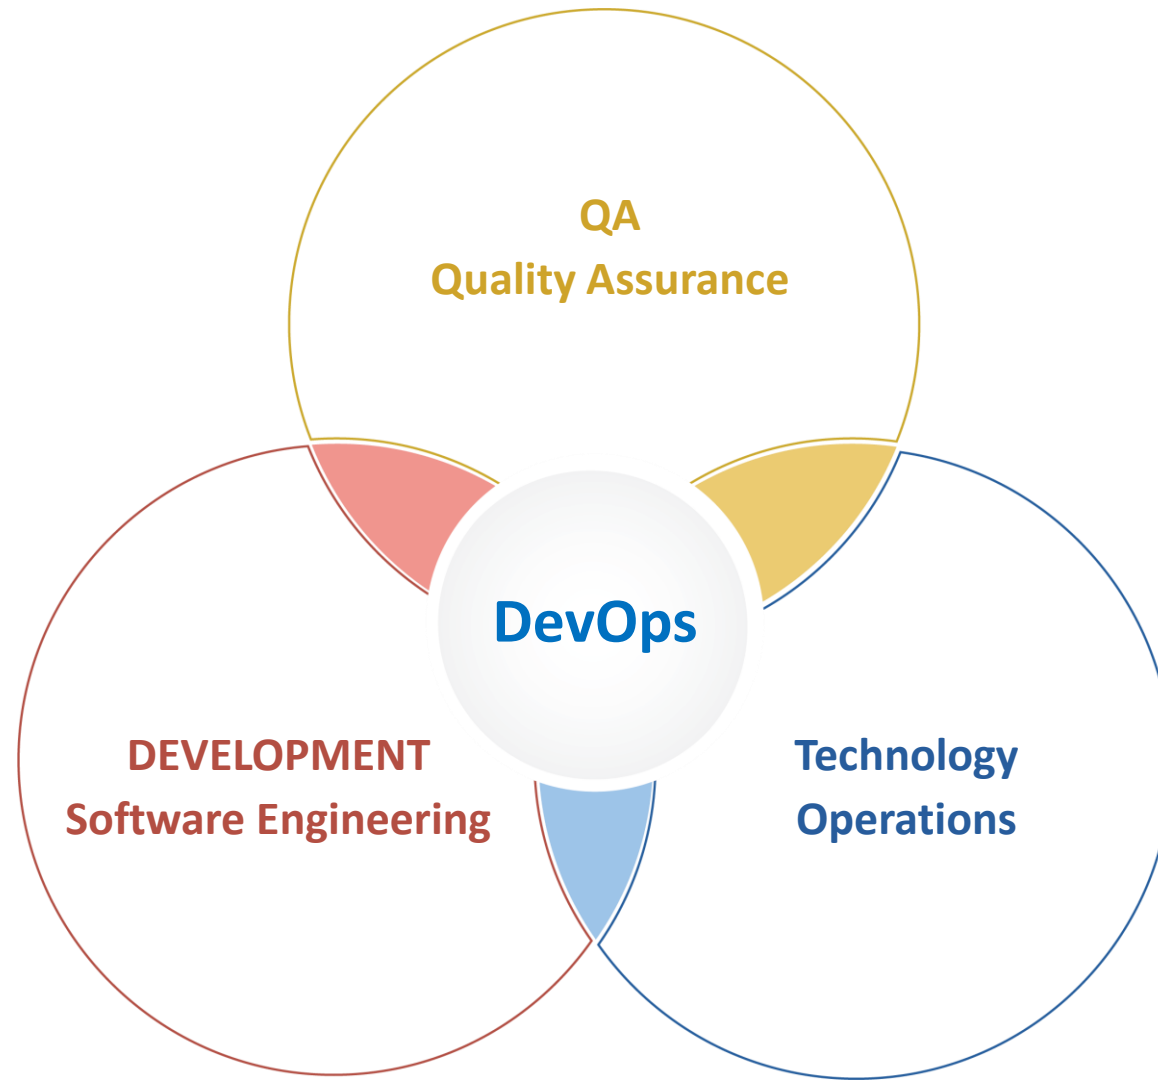

DevOps Solves Everything

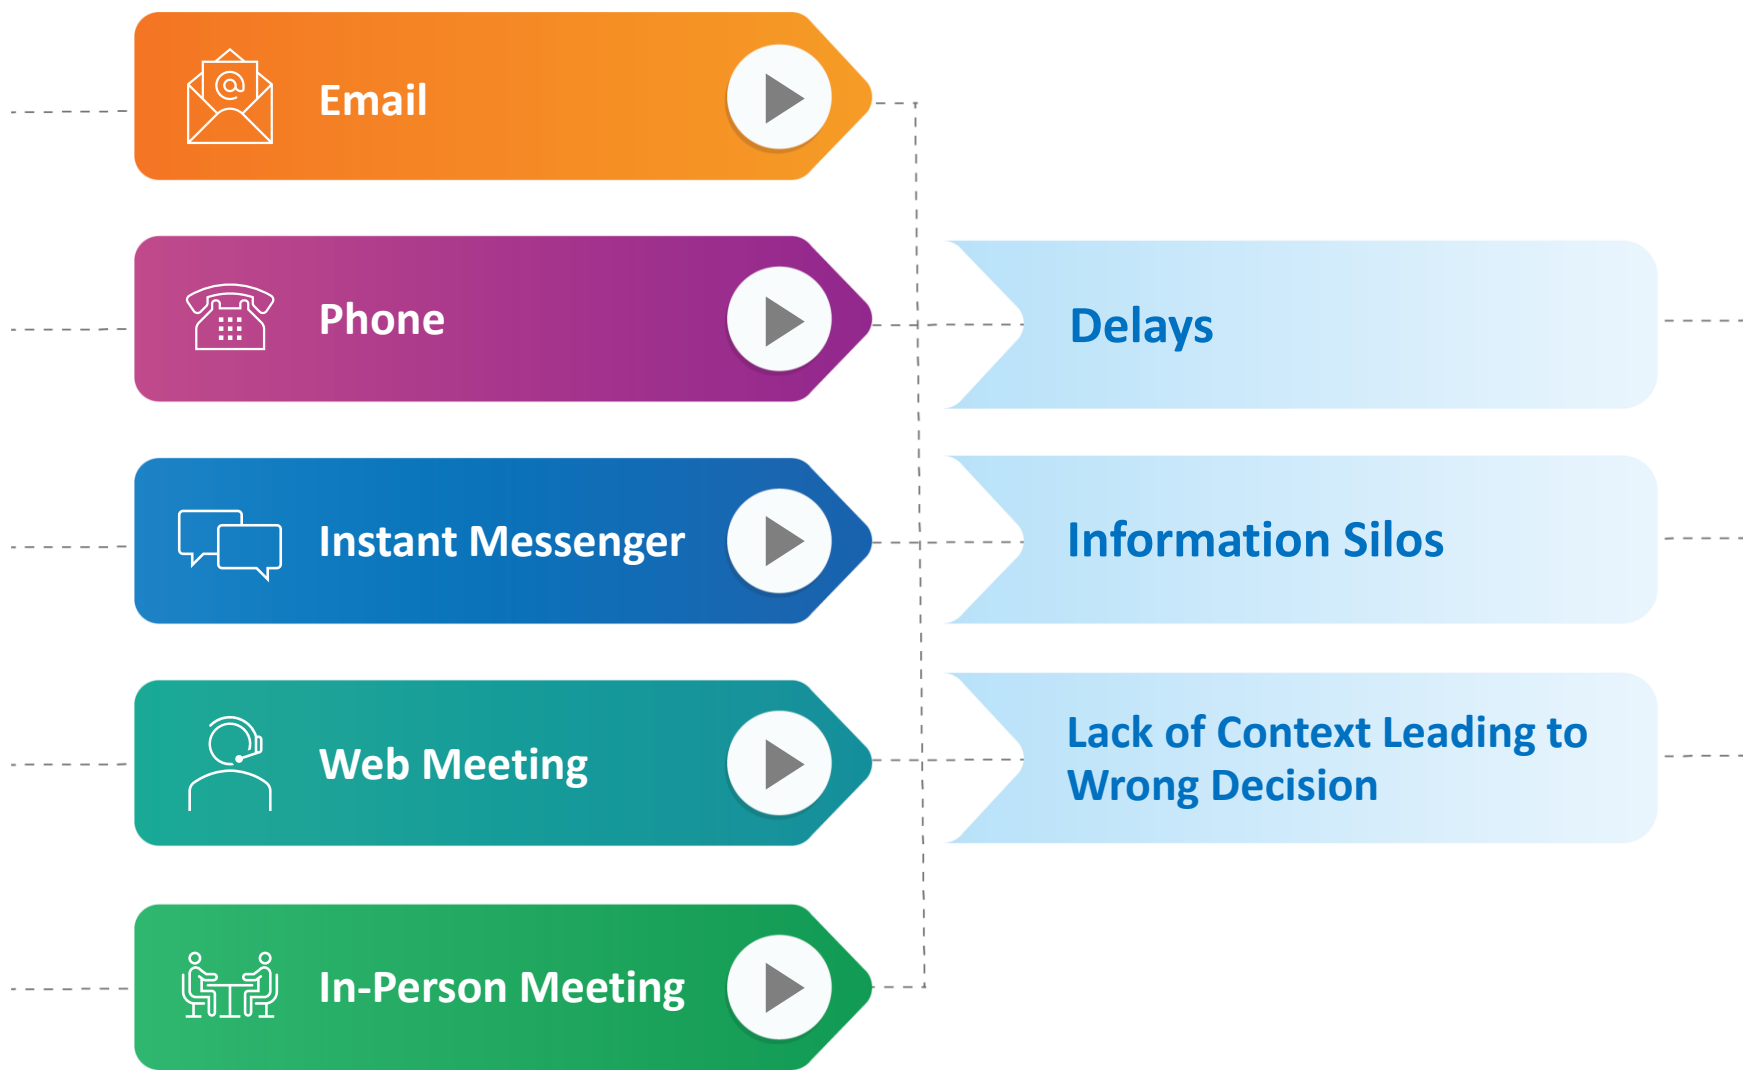

Benefits of DevOps

It's All about Collaboration

Human-to-Human Collaboration

What We Need is System-to-System Collaboration

Integrate all the tools in your DevOps toolchain

Benefits:

- Teams use the tools that they love
- Holistic view of the information
- Faster and correct decision making

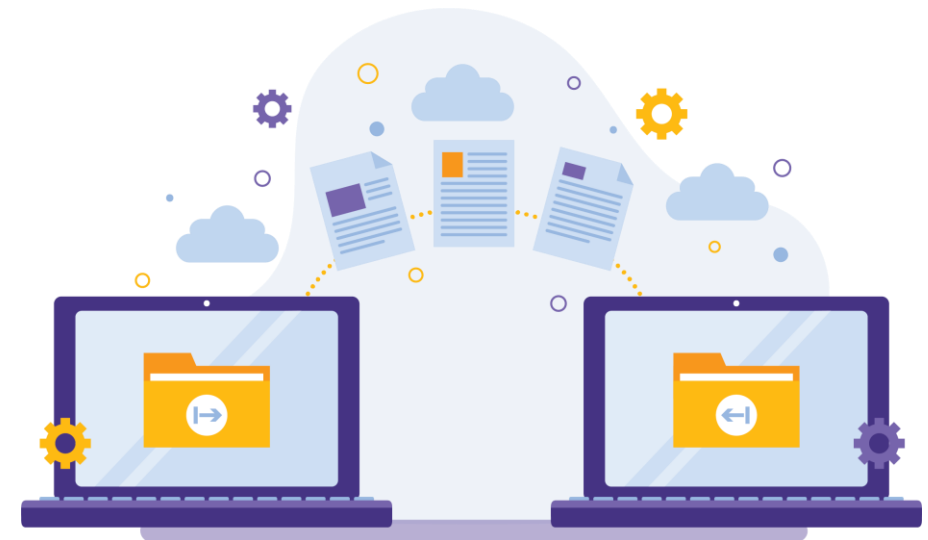

Main Challenges of DevOps

Integrate disparate best of breed tools
used by different teams

Migrate from legacy tools
to more Agile tools

OpsHub Integration Manager

An out of the box solution for all your integration and migration needs

About OpsHub

● HQ in Palo Alto, CA: Teams based in USA, Canada, India, UK

● Three key products:
OpsHub Integration Manager (OIM)
OpsHub Visual Studio Migration Utility (OVSMU)

● Hundreds of customers, proven to scale to thousands of projects and millions of artefacts for integration and migration

● 50+ connectors in ecosystem and growing

Enable
cross-functional teams with disparate
tools to collaborate effectively

Increase
overall team agility

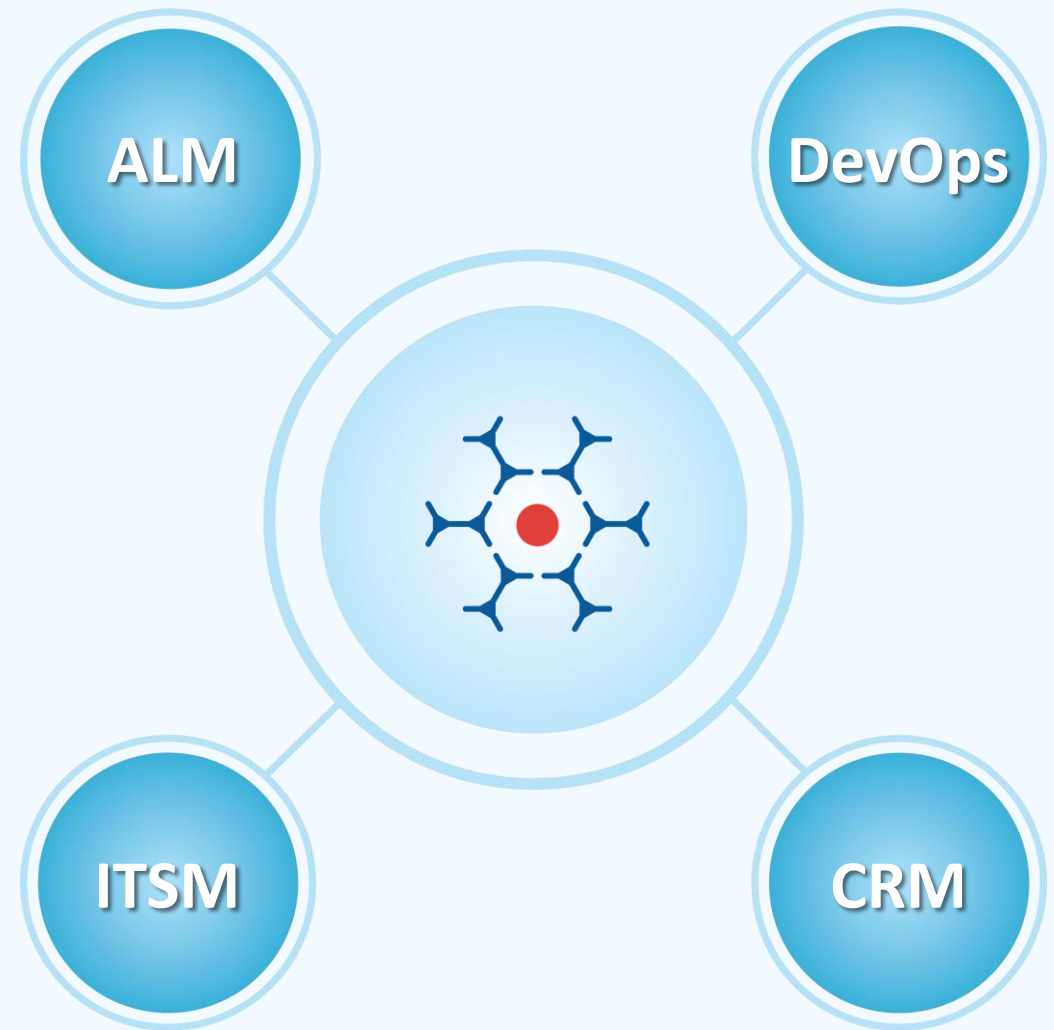

Enhance
customer centricity

OpsHub Integration and Migration Solution

Integrate 50+ ALM, DevOps, ITSM and CRM tools out of the box

OpsHub Helps Enterprises Realize the Full Potential Of Agile & DevOps

OpsHub doesn't only bind the enterprise ecosystem, but also leverages the functional richness of the individual systems to enhance the overall productivity.

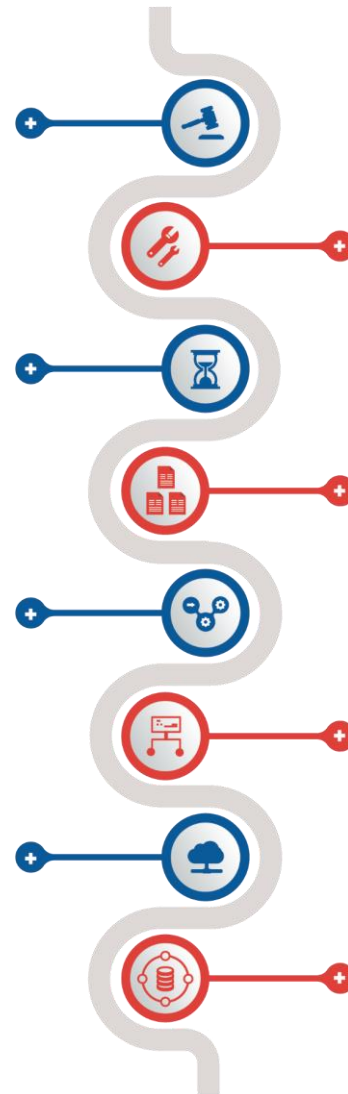

Key Features of OpsHub Integration Manager (OIM)

Conflict Management
Automatically detects and resolves conflict between the source system and the target system

History Preservation
Maintains complete history among integrated systems

Cross-system Traceability
Allows traceability between code to requirement, tickets to defects, and many other entities

Deployment
Can be hosted by OpsHub, installed on-premise,
Or deployed in a customer cloud

Failure Management and Recovery

Provides automatic failure notifications and retries the failures, as desired by the administrator, when the target system is unavailable or an entity fails to synchronize

Multi-Project and Multi-Entity Support

Available in enterprise edition and enables syncing across multiple projects and entities in a single integration

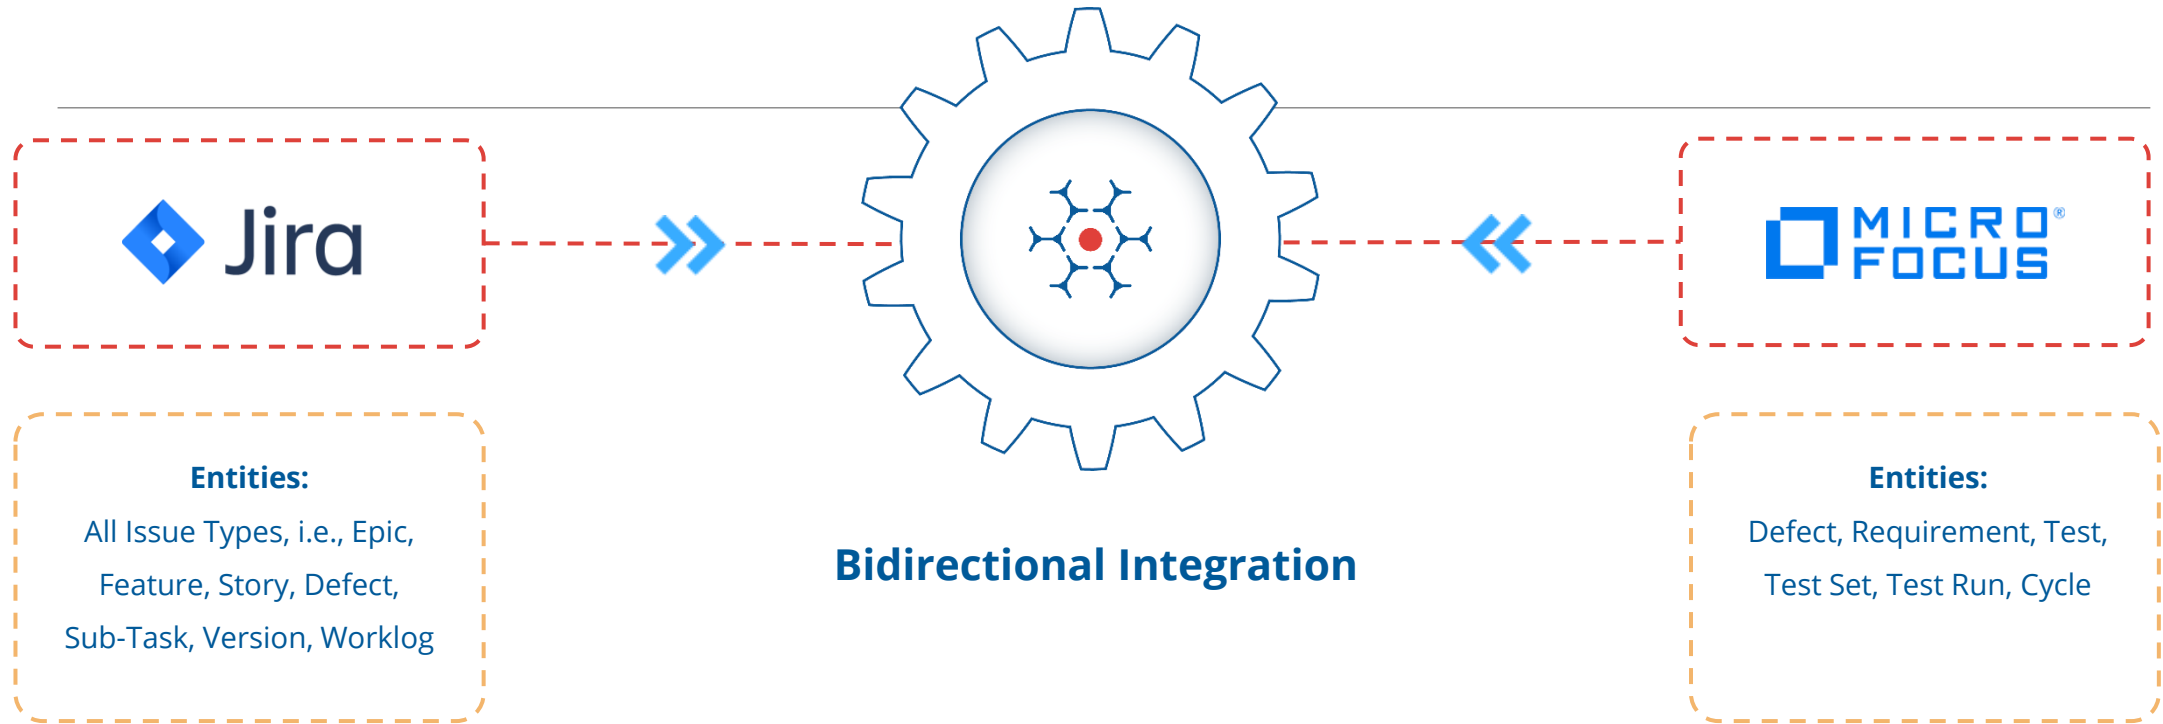

Workflow/Change Set Support

Through customization, enables additional data transformations in addition to sync

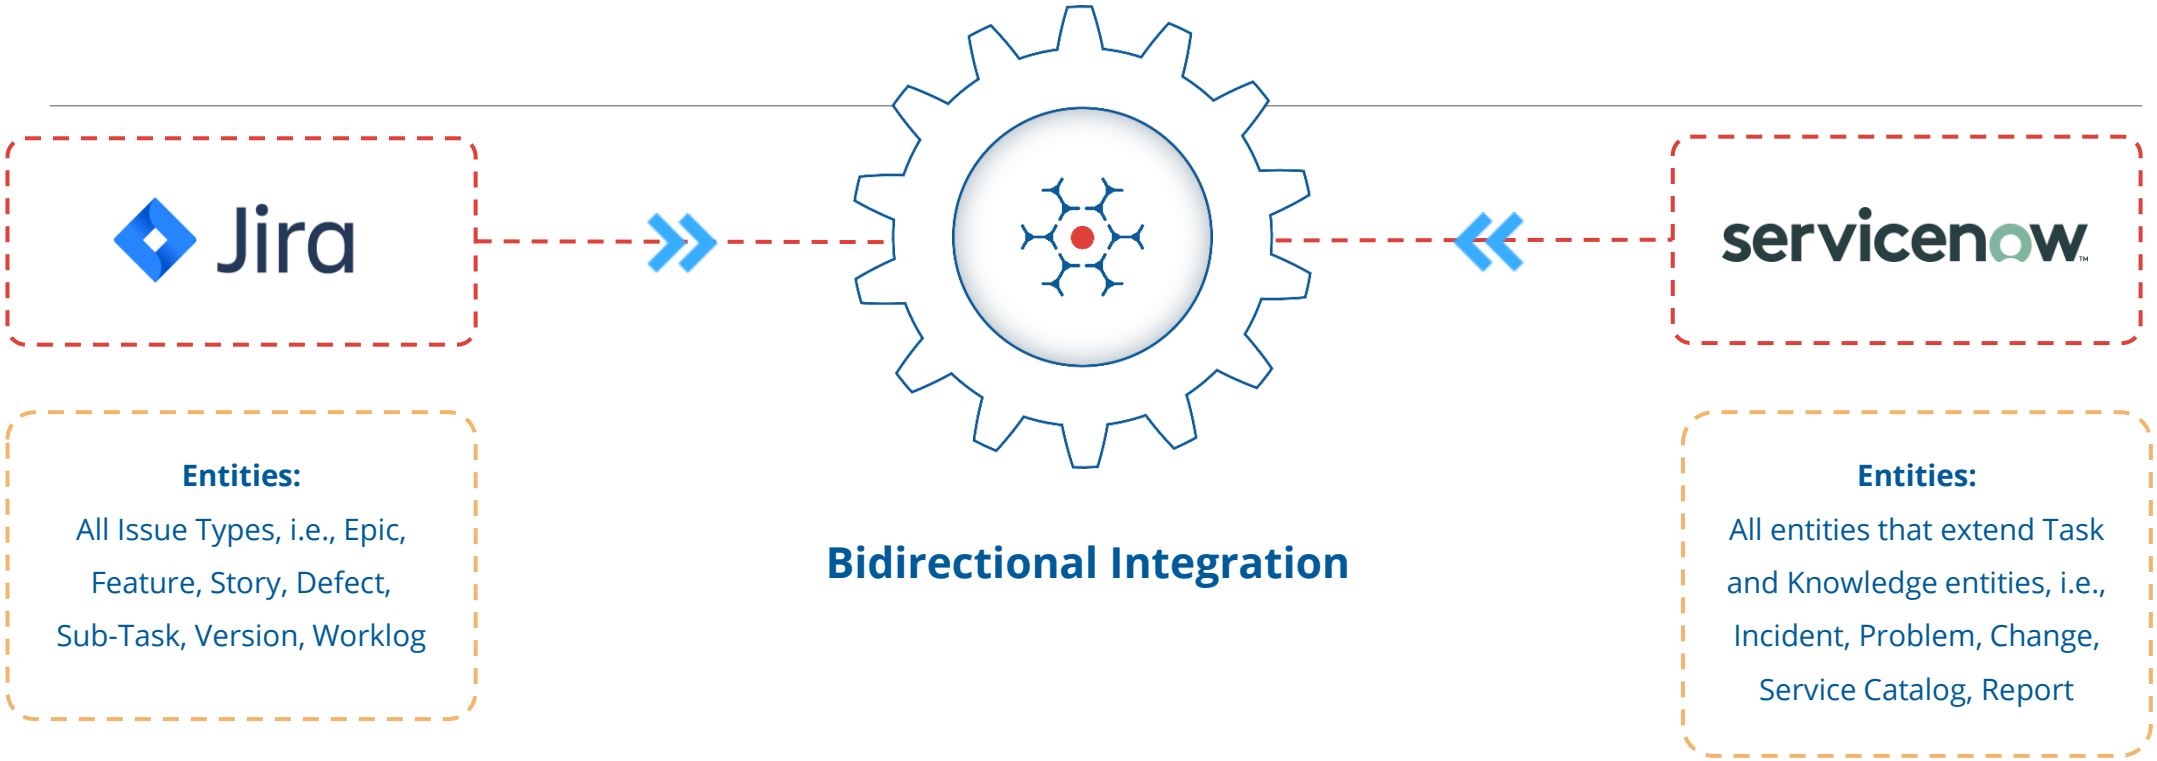

Data Security

- Privacy of end system's data is completely maintained
- Data encrypted using key-based encryption
- HTTPS deployment option available
- LDAP Integration

OIM Support for JIRA & Micro Focus ALM Integration

OIM Support for JIRA & ServiceNow Integration

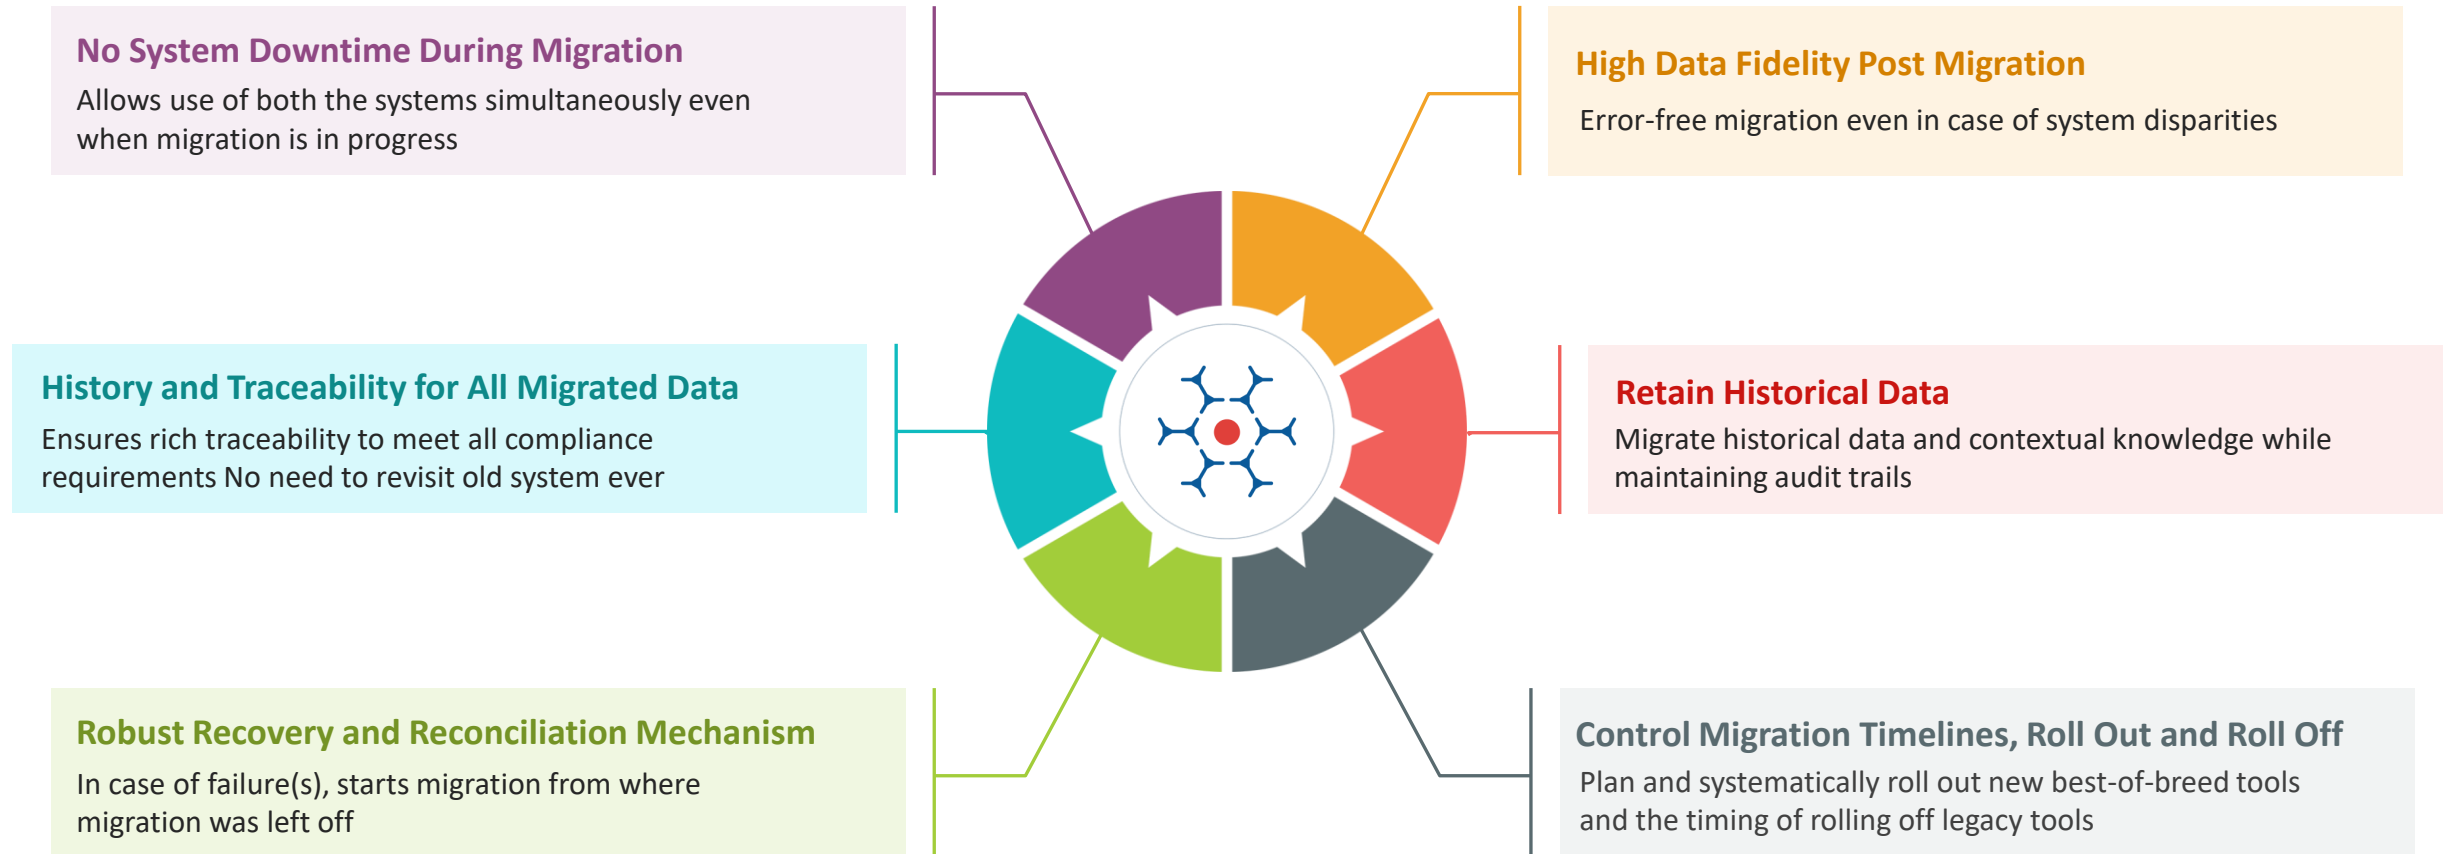

Key Supported Systems

50+ connectors and growing

OpsHub Integration Manager: Enterprise Migration

OpsHub Visual Studio Migration Utility

You can add migrate from:

Features of OVSMU

Zero Downtime Migration

- ✓ Teams can work on source system while the migration is going on...
- ✓ Synchronizes only the delta since the last successful sync
- ✓ Helps to plan a smooth cut-over

Migrate Work-Items and Source Code

- ✓ Migrates all work-items including Test Suite/Plan, Test Run, and Test Results
- ✓ Migrate source code from and preserve linkage to work-items
- ✓ Migrates projects with custom work-item template

Failure Management and Recovery

- ✓ Retries failure automatically
- ✓ Recovers the migration from the last sync state (where the failure occurred)

Traceability

- ✓ Preserves versions, transitions, history
- ✓ Preserves linkages between different project if they are linked
- ✓ Stores the original date & time with original changeset ID

Other Miscellaneous Features

- ✓ Supports merging/splitting of projects
- ✓ Migrates data from one template to another (Agile to Scrum to CMMI)
- ✓ Supports selective migration

Case Studies

Success Stories and Common Use Cases

OIM - Integration

Tier 1 US Banking Customer

Benefits & Value Drivers

- Integrated Azure DevOps with Jira and MicroFocus ALM
- Improved productivity
- Improved traceability
- Improved compliance

Technology Company (ISV)

- Integrated Azure DevOps with ServiceNow
- Automate interaction between customer support, product management and development teams
- Dramatically increased responsiveness
- Improved transparency and satisfaction with customers

Success Stories and Common Use Cases

OIM - Migration

Benefits & Value Drivers

Fortune 500 Technology Company

- Zero downtime migration
- Migrated all work items from HP ALM/QC to Azure DevOps
- 300 projects, 1.5M artefacts
- Migrated full history, comments, attachments and traceability
- Merged projects and changed project structure
- Planned, systematic roll-out and cut-over

Tier 1 US Banking Customer

- Zero downtime migration
- Migrated from legacy tool to Jira and qTest
- 3,500+ projects, 5M+ artefacts
- Migrated full history, comments, attachments and traceability
- Planned, systematic roll-out and cut-over

Success Stories and Common Use Cases

OVSMU - Migration

Large US Public Accounting Firm

Benefits & Value Drivers

- Self-Service
- Zero downtime migration
- Consolidating 160+ collections into single Azure DevOps instance
- Comments, attachments & associations maintained
- Different collections in different versions of TFS

US Federal Government Organization

- Self-Service
- Zero downtime migration
- Consolidating multiple collections into single Azure DevOps instance
- Comments, attachments & associations maintained
- Different collections in different versions of TFS
- Extensive template customization
